The goal of the Idaho Anemometer Equipment Loan Program, operated by the Idaho Energy Division, the Bonneville Power Administration (BPA) and the Idaho National Laboratory (INL) is to assist the residents of Idaho in evaluating the potential value of wind on their lands. Using information you provide on this form, the three agencies will select applicants to whom they will offer equipment.

The Loan Criteria:

1. You may find wind power classification for your site by checking the Idaho wind map. At present, anemometers are going only to sites that show as wind classification 3 or above. To determine your wind power class visit www.idahowind.org and follow the Anemometer Program link to access Idaho Wind Interactive Map.
2. Proximity of electrical transmission lines to your site location
3. Geographic dispersion – The agencies would like to spread the anemometers throughout the state as much as possible.

Once the anemometer is installed and collecting data, it will remain on loan for a 12-month period. During that time, you will retrieve the data chip approximately every 60 days and send it to INL. The data will be extracted and posted on a public-access web site <http://www.inl.gov/wind>. INL will return the cleared chip to you in order that you may collect more site data and then return again in 60 days repeating the cycle.

Please provide the specific location in latitude/longitude to the nearest second (or 100th of a minute) where you propose to locate the anemometer: _____

Provide wind power classification for this site: _____
